No more toxic waste in our Lewiston area. Keep this from happening.

This was an agriculture area with rich soil and close to the Great Lakes which supplies thirty million people with their drinking water. The Great Lakes are Americas largest source of fresh water. Once the soil and fresh water is contaminated by toxic waste it will be impossible to fix. We have been the dumping ground for not only the states but from other countries....enough is enough. The huge tractor-trailers that haul the waste pass by our local central schools...from kindergarten to senior high..and they are accidents waiting to happen. We have put up with this for a long time, too many years and it is now time for another place be found to accommodate the solution of toxic waste. Please take a stand for fairness and justice and put an end to more toxic waste being brought into this area.

Dear Honorable Judge McClymonds:

Thank you for the opportunity to submit comments concerning my opposition to expansion of CWM facilities/operations in Niagara County. I was unable to attend the Lewiston hearings because my son and I have recently relocated from Texas to beautiful Western New York. I have been an educated citizen in north Texas and believe I have a duty to stay educated and active in my new home.

After reviewing available information from both the company and opposition, I have concluded that the economic, environmental and safety implications of this permit require the permit to be denied. This is especially recognizable when there is a credible doubt that additional waste storage is even needed and capacity at other feasible locations if it is needed. I would be happy to answer any questions you may have or share additional information. it's great to be back in town and I sure hope we can improve the area's reputation as a desirable place to live.

John Rath
