Dzus Fastener Company, Inc. Site
Willetts Creek Tidal Area Investigation

Operable Unit 5 (OU5)
- The Willetts Creek tidal area is designated as Operable Unit 5.
- Complex sites are often divided into distinct areas called operable units, to facilitate investigation and cleanup.

Sediment Sampling
- Sampling in the Willetts Creek tidal area.
- Surface water samples will also be collected.
- Samples will be analyzed for cadmium and chromium.

Culvert and Outfall Inspection
- Video inspection of stormwater culverts and outfalls that flow to the Willetts Creek tidal area.
- Collection of deposited sediment in the culverts and outfalls.
- Samples will be analyzed for cadmium and chromium.

Residential Soil Sampling
- Investigation of properties adjacent to the Willetts Creek tidal area.
- The NYSDEC is actively seeking permission for access to properties to conduct the sampling.
- Samples will be analyzed for cadmium and chromium.

Reporting
- A Remedial Investigation Report will be prepared to summarize the results of the investigation work.
- A Feasibility Study Report will be prepared to develop and evaluate various alternatives for cleaning up contamination found during the investigation.

Schedule
- Investigation work currently scheduled to begin in Spring 2019.
- The Remedial Investigation Report and Feasibility Study Report scheduled to be completed in early 2020.
